Project Name	Sustainable Waste Management AI Assistant
Maximum Marks	2 Marks

Brainstorming & Idea Prioritization

1. Brainstorming Ideas

To tackle urban waste disposal challenges, the team evaluated three alternative AI solutions:

- Option A: Waste Classification Assistant. A search/scanner app that instantly classifies materials, lists hazard ratings, and shows steps to discard them safely. (Selected)
- Option B: Static Municipal Information Portal. A lookup directory listing opening hours of recycling centers. (Rejected)
- Option C: Smart Recycling Bot. A conversational AI assistant providing general tips about green habits. (Rejected)

2. Prioritization Matrix

The solutions were evaluated based on Feasibility, Tech Stack compatibility, and User Value:

- Option A (AI Waste Scanner): Feasibility (High), User Value (High) - Score: 9.5/10
- Option B (Static Portal): Feasibility (High), User Value (Low) - Score: 4.0/10
- Option C (AI Chatbot): Feasibility (Medium), User Value (Medium) - Score: 6.0/10
