## Define Problem Statements

### 1. Problem Statement Definition

Urban citizens face massive friction when disposing of waste. Traditional guide sheets are text-heavy and rarely specify how to handle complex items (e.g. wet cardboard vs dry cardboard, e-waste, lithium batteries, and biomedical syringes). This results in recyclable contamination, fire hazards, and toxic chemical leaching in municipal landfills.

### 2. Primary User Personas & Constraints

- User Persona 1: Busy Apartment Dweller. Wants to recycle correctly but lacks time to search complex municipality bylaws online.
- User Persona 2: Suburban Homeowner. Accumulates batteries, paints, and old electronics, and needs directions to verified hazardous disposal hubs.
